

Educational Pharmacy

Faculty of Pharmacy, Tanta University

- As community pharmacy is one of the workplaces for pharmacists, the educational pharmacy represents a simulation to the community pharmacy that allows practical training of students to relate their academic knowledge with the field of practice.
- Training in the educational pharmacy is conducted by academic staff members of the faculty and DIC pharmacists under the supervision of the Vice Dean for Students and Educational Affairs.
- The training program lasts for 18 hours over 6 days for every group.
- All pharmacy students and graduates are eligible to join the training program.
- Training is implemented through workshops, simulated situations, role play, and self-learning

TOPICS OF TRAINING PROGRAM

- 1- Overview of the community pharmacy and its constituting parts.
- 2- Guidelines and structural specifications required to get license for a pharmacy.
- 3- Identification of different dosage forms and the route of administration for each drug.
- 4- Drug reservation and put in fine order.
- 5- Practice and professional ethics for the pharmacist.
- 6- Search for drug information using web sites and software programs.
- 7- Interpretation of prescriptions.

- 8- Training on the usage of electronic pharmacy management program (B-connect).
- 9- Patient counseling for rational drug use to achieve the therapeutic effect and avoid adverse reactions.
- 10- Communication skills and interaction with the surrounding community.
- 11- Measurement of blood sugar and blood pressure.
- 12- Rational use of OTC (over the counter) drugs.
