

Simulation Lab

- Simulation Lab at the Faculty of Pharmacy is a virtual lab that depends on the usage of software programs as a substitute to the actual lab. The electronic programs help students to carry out interactive experiments to identify the concept and get the results by themselves. Some programs are available that allow to study mechanisms of drug action, therapeutic effects, side effects and toxicity of drugs to different tissues and organs of human body.
- It includes 85 computers connected to the internet and a large display screen. The chosen programs help to enhance the practical skills and achieve the intended learning outcomes.
