Preface

vii

1. General Pharmacognostic Considerations

1-47

I. Introduction 1

History 1

Scope and development of pharmacognosy 2

Classification of crude drugs 3

Evaluation of crude drugs 7

Important definitions 19

II. Basic Concepts of Pharmacognosy 21

Unorganised drugs 22

Organised drugs 22

III. Basic Techniques of Pharmacognosy 22

Macroscopical examination 22

Microscopical examination 22

Quantitative analytical microscopy 24

IV. Methods of Extraction 25

Maceration 26

Percolation 26

Hot continuous extraction 27

Steam distillation 27

Infusion 27

Decoction 28

Expression 28

Filtration 28

Vesication 28

Pulverization 28

Trituration 28

V. Separation and Identification 28

Thin layer chromatography (TLC) 29

Paper chromatography 30

High performance liquid chromatography (HPLC) 31

Gas liquid chromatography (GLC)	33
High performance thin layer chromatography (HPTLC)	33
VI. Spectroscopic Methods of Analysis of Herbal Drugs	34
Ultraviolet and visible spectroscopy (UV-visible spectra)	34
Infrared spectroscopy (IR spectra)	35
VII. Chemical Tests for Various Classes of Phytoconstituents	36
General tests	36
Alkaloids	36
Glycosides	36
Steroids and terpenoids	36
Tannins	37
Flavonoids	37
Oils and fats	38
Proteins and amino acids	38
Carbohydrates	38
Volatile oils	39
Amino acids	39
Lipids	39
Specific tests	45
Alkaloids	45
Glycosides	46
Resins	47

2. Powder: Morphological and Microscopical Studies

48-131

1. To study the simple and compound microscopes 48
2. To study the section cutting technique of stem, root and leaf, and staining and mounting of a section 49
3. To measure the length and breadth of fibres in the given sample 50
4. To measure the size of calcium oxalate crystals in the given powdered sample 51
5. To measure the diameter of starch grains in the given powdered sample 52
6. To determine the palisade ratio in the leaf sample 54
7. To determine the stomata number and stomatal index of leaf 55
8. To determine the vein islet number and vein termination number of leaf 56
9. To determine the swelling index of the given sample drug 56
10. To determine the total ash, acid insoluble ash and water soluble ash of the given crude drug 57
11. To determine the extractive value of the given crude drug 58
12. To determine the moisture content of given crude drug by loss on drying method 58
13. To study the morphological, microscopical and powder characteristics of leaf of *Digitalis lanata* 59
14. To study the morphological, microscopical and powder characteristics of leaf of *Digitalis purpurea* 61

15. To study microscopical powder characteristics of Digitalis leaf 64
16. To study the morphological, microscopical and powder characteristics of Senna leaf 65
17. To study the morphological, microscopical and powder characteristics of Vinca leaf 68
18. To study the morphological, microscopical and powder characteristics of Vasaka leaf 70
19. To study the morphological, microscopical and powder characteristics of Datura leaf 73
20. To study microscopical powder characteristics of Hyoscyamus leaf 76
21. To study the morphological, microscopical and powder characteristics of Clove 77
22. To study the morphological, microscopical and powder characteristics of Ginger 80
23. To study the morphological, microscopical and powder characteristics of Coriander 82
24. To study the morphological, microscopical and powder characteristics of Rauwolfia 84
25. To study the morphological, microscopical and powder characteristics of Cinchona bark 86
26. To study the morphological, microscopical and powder characteristics of Cassia bark 88
27. To study the morphological, microscopical and powder characteristics of root of Liquorice 91
28. To study the morphological, microscopical and powder characteristics of Kurchi bark 95
29. To study the morphological, microscopical and powder characteristics of Ephedra (Ma-Huang) stem 97
30. To study the morphological, microscopical and powder characteristics of Ipecacuanha root 98
31. To study the morphological, microscopical and powder characteristics of Nux Vomica seed 101
32. To study powder characteristics of Rhubarb 104
33. To study powder characteristics of Indian Squill 106
34. To identify given unknown powder mixture (Senna and Squill) 107
35. To identify given unknown powder mixture (Vasaka and Ipecac) 108
36. To identify given unknown powder mixture (Digitalis and Liquorice) 109
37. To identify given unknown powder mixture (Cinchona and Vasaka) 109
38. To study morphology of given drugs: Ashoka bark, Arjuna bark, Tulsi, Bahera, Amla, Vasaka, Harad 111
39. To study morphology of given drug samples: Satavari, Giloi, Chhota Gokhru, Bada Gokhru, Rasna, Methi 116

40. To study morphology of given drugs: Majith, Guggal, Kantakari, Brahmi, Punarnava, Chitrak 120
41. To study morphology of given drugs: Turmeric, Ajowan, Black Catechu 125
42. To study morphology of given drugs: Neem, Aloe, Lemon grass, Nirgundi, Jatropha 127

3. Identification of Crude Drugs

133–150

I. Carbohydrates 133

1. To identify the given sample of Guar gum 133
2. To identify the given sample of Agar 133
3. To identify the given sample of Acacia 134
4. To identify the given sample of Pectin 134
5. To identify the given sample of Honey 135
6. To identify the given sample of Starch 136
7. To identify the given sample of Tragacanth 136
8. To identify the given sample of Sterculia gum 137
9. To identify the given sample of Isapgol 137

II. Lipids 138

10. To identify the given sample of lipids: Cod liver oil, Cocoa butter, Castor oil, Linseed, Rice bran oil, Hydrous wool fat, Lard, Shark liver oil, Sandalwood oil 138

III. Resin and Resin Combination 141

11. To perform morphological and chemical tests of Asafoetida 141
12. To perform morphological and chemical tests of Balsam of Tolu 141
13. To perform morphological and chemical tests of Balsam of Peru 142
14. To perform morphological and chemical tests of Benzoin 142
15. To perform morphological and chemical tests of Colophony 143
16. To perform morphological and chemical tests of Cannabis 143
17. To perform morphological and chemical tests of Capsicum 144
18. To perform morphological and chemical tests of Jalap 144
19. To perform morphological and chemical tests of Ginger 145
20. To perform morphological and chemical tests of Myrrh 145
21. To perform morphological and chemical tests of Podophyllum 146
22. To perform morphological and chemical tests of Turmeric 146

IV. Tannin and Tannin Containing Drugs 147

23. To perform morphological and chemical tests of Black Catechu 147
24. To perform morphological and chemical tests of Myrobalan 148

V. Chemical Evaluation of Powdered Drugs 148

25. To perform chemical tests of Digitalis, Datura, Senna, Cinchona, Aloe, Rauwolfia, Nux Vomica 148

4. Fibres 151–158

1. To identify the given samples of natural fibres (cotton and jute) 151
2. To identify the given samples of animal fibres (wool, silk) 153
3. To identify the given samples of artificial regenerated fibres (viscose rayon, acetate rayon) 154
4. To identify the given samples of artificial synthetic fibres (nylon, terylene) 155
5. To examine a fabric used as a surgical dressing (crepe bandage) 156
6. To examine surgical dressings 156
7. To determine crude fibres by Dutch method 157

5. Plant Tissue Culture 159–169

- General Procedures Involved in Plant Tissue Culture 159
1. To prepare and sterilize given tissue culture medium 163
 2. To carry out aseptic germination of given seeds 165
 3. To perform *in vitro* callus induction of aseptically germinated seedlings/given plant 166
 4. To develop callus culture from carrot combine explants 166
 5. To determine antimicrobial activity of crude drugs 167

6. Extraction, Isolation, Identification and Estimation of Phytoconstituents 170–212

1. To carry out isolation of starch from potatoes 170
2. To carry out extraction of solanine from potatoes 171
3. To carry out isolation of citric acid from lemon 172
4. To isolate calcium citrate from lemon juice 173
5. To carry out extraction of pectin from fresh orange peels 173
6. To isolate hesperidin from orange peel 174
7. To prepare TLC plates 175
8. To isolate caffeine from tea leaves 176
9. To carry out isolation of nicotine picarate from Tobacco leaves 177
10. To carry out isolation of curcumin from *Curcuma longa* 178
11. To carry out isolation of calcium sennoside from Senna leaf powder 179
12. To carry out isolation of lawsone from Heena powder 180
13. To carry out isolation of vasicine in Vasaka leaf powder 181
14. To carry out isolation of diosgenin from Fenugreek seeds 182
15. To carry out isolation of aloin from Aloe powder 183
16. To carry out isolation of quinine sulphate from Cinchona bark powder 184
17. To carry out isolation of arteminin from *Artemisia annua* 186
18. To carry out isolation of vincristine from Vinca 186
19. To carry out extraction of strychnine and brucine from Nux Vomica seeds 186
20. To extract ammonium glycyrrhizinate from Glycyrrhiza powder and to carry out its TLC studies 188

21. To carry out isolation of glycyrrhetic acid from Liquorice roots 189
22. To carry out extraction of *Withania somnifera* 189
23. To carry out extraction of resins from Jalap roots 190
24. To isolate piperine from Black Pepper and carry out its TLC studies 191
25. To isolate eugenol from Clove oil 192
26. To carry out isolation of eugenol from Cinnamon leaf oil 193
27. To isolate volatile oil from Fennel 194
28. To carry out isolation of lemon grass oil from Lemon grass 196
29. To determine volatile oil content in given sample of Eucalyptus leaves by hydrodistillation method 196
30. To determine volatile oil content in given sample of *Mentha piperita* leaves by hydrodistillation method 197
31. To prepare and submit TLC plate of given crude drug (Cinchona bark) 198
32. To carry out TLC study of Clove oil and Datura 198
33. To carry out TLC study of Rauwolfia, Cinchona and Black Pepper 199
34. To identify constituents of given herbal drug preparation by chromatographic methods 199
35. To identify constituents of given herbal drug preparation by circular paper chromatography 200
36. To identify the amino acids in given mixture by comparing their R_f values with reference standards 200
37. To perform paper chromatography of given known sample of protein 201
38. To identify alkaloids in cinchona bark extract by comparing their R_f values with reference standards 201
39. Estimation of vasaka alkaloids in *Adhatoda vasika* by titrimetry method and TLC 202
40. Estimation of total tannin in Harad powder 202
41. Estimation of sennoside from Senna powder by colorimetry (IP-1996) 203
42. Estimation of quinine in Cinchona bark powder as per BP-2000 203
43. To estimate vitamin C in Chayvanprash by colorimetry 204
44. To estimate citral in Lemon oil 204
45. To demonstrate the column chromatography 204
46. Pharmacognostical and phytochemical investigation of Tulsi plants 205
47. Determination of percentage purity of ginger in various samples by Wallis's lycopodium spore method 206
48. Determination of foaming index of given drug sample (Glycyrrhiza and Shatavari) 208
49. Determination of swelling index of given drug sample (Isapgol and Methi) 209
50. To estimate sennoside B from Senna leaf powder 210
51. To determine barbaloin from *Aloe Vera* 211
52. To determine volatile oil content of Eucalyptus leaves 212

7. Preparation and Standardization of Ayurvedic Formulations 213–268

1. To perform phytochemical screening of crude drugs 215
2. To prepare and evaluate marketed formulation of churna (Hingastak churna and Trikatu churna) 220
3. Estimation of total tannin from Amla, Baheda, Harde by titrimetric method 222
4. To prepare and evaluate Swarna Bhasma 224
5. To prepare and evaluate Titoplodi churna 227
6. To prepare and evaluate Triphala churna 228
7. Comparative TLC study of ellagic acid, gallic acid, curcumin in given marketed Pathayadi kwatha (Sadanga churna) 231
8. To determine the particle size of the given sample (nagod) by sieving method and optical microscopy 232
9. To prepare and evaluate Chawanprash Avaleha 234
10. To prepare and evaluate Dhatriyaristha 236
11. To prepare and evaluate Dashmularishtha 237
12. To prepare and evaluate Mahavasava 240
13. To find out the antioxidant activity of kwath 241
14. Estimation of total flavonoids content of kwath 244
15. Estimation of total phenolic content of given compound 244
16. Determination of various leaf surface data (leaf constant of stomatal number and stomatal index) 246
17. To determine the total ash and acid insoluble ash of given drug (*Withania somnifera*/ Black Peppere) 248
18. To determine ash value of a given powdered crude drug (Liquorice) 248
19. To determine extractive value of a given powdered crude drug (Liquorice) 249
20. To determine the amount of ethanol present in the given sample of Asava or Arista 250
21. Estimation of total alkaloids 250
22. Preparation and evaluation of prepared herbal cream 251
23. To determine saponification value of the given sample of oil 253
24. Determination of leaf constant data (leaf constant of vein islet and vein let termination number) 254
25. To identify constituents of given herbal drug preparation by chromatographic method 254
26. To separate active principles of plant materials by column chromatography and high pressure liquid chromatography (HPLC) 255
27. To develop method in HPTLC and estimate sennoside B and glycerrhizin from capsule and simultaneous estimation of sennoside and glycerrhizin 260

8. Stains and Reagents for Microchemical Reactions 269–274

<i>Suggested Readings</i>	275
<i>Index</i>	277
